

NAHID HOSSAIN

Full-Stack Developer | React.js, Next.js, Node.js & TypeScript

+880 1617121519 @ nahid4510@gmail.com Portfolio Dhaka, Bangladesh

SUMMARY

Frontend-Focused Full-Stack Developer with experience building scalable, responsive, and high-performance web applications using **React.js**, **Next.js**, **TypeScript**, and **Node.js**. Skilled in developing modern user interfaces, RESTful APIs, and database-driven solutions with **MongoDB** and **Supabase**. Proficient in state management, authentication, and performance optimization. Strong understanding of software quality, clean code principles, and agile development practices. Passionate about creating seamless digital experiences and delivering reliable, maintainable solutions.

EXPERIENCE

Frontend Engineer

Elite Wheel Distributors, Inc.

03/2026 - Present Tampa, FL, United States (Remote)

- Developed high-performance frontend architecture using **React.js**, **Next.js**, and **TypeScript**, serving **2,000+ daily active users** with optimized rendering and responsive UX across devices.
- Designed a reusable component system and analytics dashboards for a **multi-tenant SaaS platform supporting 300+ reseller accounts**, improving UI consistency across modules.
- Integrated **RESTful backend services (Express.js)** to enable secure role-based communication between frontend modules and external systems, supporting **1,000+ daily API interactions across distributed application layers**.
- Implemented **authentication and state management architecture** using **JWT**, **Redux Toolkit**, **React Query**, and **Context API**, improving session handling efficiency and reducing redundant data requests by **~25% across core workflows**.
- Collaborated on **data modeling and API-driven workflows** using **MongoDB**, **Mongoose**, and **Supabase**, managing **10,000+ structured records** while ensuring consistent synchronization between frontend and backend systems.
- Improved **Core Web Vitals and frontend performance**, reducing **LCP from 4.2s → 0.9s** through code splitting, lazy loading, and asset optimization.

Frontend Engineer

DevelopersTroop- Web, App, SEO & Software Company

09/2025 - 03/2026 Dhaka, Bangladesh (Remote)

- Delivered **responsive frontend features and UI modules** improved for usability and cross-browser compatibility, supporting **enterprise and client-facing applications with 2,000+ active daily users**.
- Integrated and streamlined **DriverRight API** within **Year/Make/Model (YMM) filtering system**, improving product matching accuracy from **70% → 95%**.
- Deployed **Bunny CDN across multiple e-commerce platforms**, increasing GTmetrix performance score from **55% → 99%** and significantly improving asset delivery speed.
- Shipped **5+ production-ready frontend applications**, covering UI development, feature implementation, and deployment across client projects.

SKILLS

React.js

Next.js

TypeScript

JavaScript (ES6+)

Node.js

Express.js

MongoDB

Mongoose

MySQL

Supabase

Redux Toolkit

Context API

TanStack Query (React Query)

React Hook Form

Axios

Tailwind CSS

Framer Motion

React Router DOM

Firebase

JWT

GraphQL

Socket.io

Prisma ORM

Vitest

REST API Development

SSR/SSG/ISR

Docker

Git

GitHub

Postman

EDUCATION

B.Sc. (Engineering) in Information and Communication Technology

Islamic University, Bangladesh

07/2024 - Present Kushtia, Bangladesh

PROJECTS

Tirematic – Multi-Vendor Tire E-Commerce Platform

📍 Tampa, United States | Office Project

🔗 <https://stage.tirematic.com>

Project Details: <https://surl.li/tdjsgg>

A scalable **multi-vendor vehicle tire e-commerce platform** with storefront, admin, vendor, and affiliate modules, enabling end-to-end marketplace operations including product management, order processing, and vendor coordination.

- **Engineered** customer-facing and administrative modules supporting **2,000+ daily users**, enabling efficient product discovery, order tracking, and account management.
- **Improved** checkout and payment workflows, maintaining **99%+ transaction reliability** while reducing friction across the purchase journey.
- **Automated** synchronization between **NetSuite ERP, AWS S3, and Google Drive**, ensuring **95%+ data accuracy** for inventory, media, and business-critical assets.
- **Orchestrated** cart, order, and email automation workflows, contributing to a **30% increase in conversion-related actions**.
- **Streamlined** communication between frontend and backend services via **RESTful APIs**, improving data consistency and reducing integration overhead.
- **Enhanced** platform responsiveness using **SSR** and **dynamic** rendering strategies, resulting in faster page load performance under high traffic conditions.
- **Collaborated** with cross-functional teams to translate business requirements into scalable features, ensuring stable and timely production releases.

eBooi – Full-Stack Ebook & Bookstore Platform

📍 Bangladesh | Personal Project

🔗 <https://e-booi.com>

Github Repository: [Click Here](#)

A **full-stack e-commerce platform** built for the **Bangladeshi book market**, enabling customers to purchase **digital ebooks** and **physical books** through a unified shopping experience powered by **Next.js, React, Node.js, Express, TypeScript, MongoDB**, and **SSLCommerz**.

- **Engineered** a scalable bookstore platform supporting **authentication, shopping cart, wishlist, reviews, coupons**, and **role-based administration** for a seamless customer experience.
- **Integrated SSLCommerz** to enable secure payments through **bKash, Nagad, Rocket**, and **bank cards**, delivering a localized checkout workflow with reliable transaction handling.
- **Implemented** automated **digital book delivery, email notifications**, and **bilingual PDF invoice generation** for streamlined post-purchase communication and document management.
- **Designed** comprehensive **admin dashboards** to manage books, orders, users, coupons, reviews, and sales analytics through a centralized management interface.
- **Optimized** application performance using **Next.js App Router, server-side rendering, TanStack Query**, and efficient API data fetching to improve responsiveness and user experience.
- **Architected** a modular **feature-based architecture** with reusable components, scalable REST APIs, and maintainable backend services to support long-term scalability and future enhancements.
- **Developed** secure authentication using **JWT access and refresh tokens, httpOnly cookies**, and **role-based authorization** to protect customer and administrative resources.
